MATH 53 WORKSHEET: Rate of volume change in flow Wasjor N=2 use N=2 use N=3 and N=3 and N=3 are N=3 and N=3 are N=3 are

Find de (det J) in terms of a, b, e,d, w,x, y, z. product rule,

Simplify (helf the terms will cancel):

Factorize into \$\frac{1}{dt} (\det J) = (?) det J .

something depending on \$\frac{1}{2}f\$

What is the "something" in terms of partials of \$\frac{1}{2}\$?

its multivariable calculus name is?

Write the (general or case): at (det J) =

Lionville's theorem

Evaluate this for Hamiltonian flow $\vec{z}^s = \begin{bmatrix} 0 & I \\ -I & 0 \end{bmatrix} \vec{\nabla}_i H(\vec{z})$ this is $\vec{f}(\vec{z})$.

MATH 53 WORKSHEET: Rate of volume change in flow u 128/07 Jacoben J = [a b] of time-t map satisfies the ODE $\dot{J} = (\ddot{J})J$ Jacobson of flow.

[a b] = [w x] [a b]

[c d] Find de (det J) in terms of a, b, ed, w, x, y, z write det I le use product rule, Co de (ad-be) = ad+ad-be-be anbstitut à = wa + xc etc. - wad+xed + ay6+azd - wbc-xde-bya-bze Simplify (helf the terms will cancel): ad (w+z) - be(w+z) = (w+z) (ad - be) det J. Tr (DF) Factorize into & (det J) = (W + Z). det J.

**Something depending on DF What is the "something" in terms of partials of f? 351 + 362 = dirf かず = ラガ its multivariable calculus name is? D.f divorthe (general n case): Liminile's theorem Evaluate this for Hamiltonian flow $\vec{z}^{\circ} = \begin{bmatrix} 0 & | I \\ -I & | O \end{bmatrix} \vec{\nabla} H(\vec{z})$ this is $\vec{f}(\vec{z}) = \begin{vmatrix} \partial H/\partial p_1 \\ -\partial H/\partial q_2 \end{vmatrix}$ $\vec{\nabla} \cdot \vec{f} = \frac{\partial}{\partial q_1} \frac{\partial H}{\partial p_1} + \dots + \frac{\partial}{\partial q_n} \frac{\partial H}{\partial p_n} - \frac{\partial}{\partial p_1} \frac{\partial H}{\partial q_n} - \dots - \frac{\partial}{\partial p_n} \frac{\partial H}{\partial q_n} = 0$ cancel etz cancel etz cancel etz
