MATH 53 WORKSHEET : Linear stability in 2D.

o) Consider $A = \begin{pmatrix} a & 0 \\ 0 & b \end{pmatrix}$

Find the condition on the eigenvalues such that $\vec{p} = \vec{0}$ is a...

Saddle :

b) For $A = \begin{pmatrix} 2 & 0 \\ 0 & 1/2 \end{pmatrix}$ write and plot the first few iterates of $\vec{X}_0 = \begin{pmatrix} 1 & 4 \\ 4 & 3 \end{pmatrix}$ What curve do they all lie on?

Yenify if $A = \begin{pmatrix} a & b \\ 0 & a \end{pmatrix}$ that $A^n = a^{n-1} \begin{pmatrix} a & n \\ 0 & a \end{pmatrix}$

Write out A" X and use this to decide condition on a such that sink

MATH 53 WORKSHEET: Linear stability in 2D. o) Consider $A = \begin{pmatrix} a & 0 \\ 0 & b \end{pmatrix}$ a, b are eigenvalues Find the condition on the eigenvalues such that $\vec{p}' = \vec{0}'$ is a... sink: |a| < 1 & |b| < 1source: |a| > 1 & |b| > 1Saddle: |a|=1 & |b|>1 or |a|>1 & |b|=1. b) For A = (20) write and plot the first few iterates of Xo = (4,4) What curve do they all lie on?

hyperbola xy = 1 since $x_0y_0 = 1$ all = 1Verify if $A = \begin{pmatrix} n & 1 \\ 0 & n \end{pmatrix}$ that $A^n = a^{n-1} \begin{pmatrix} a & n \\ 0 & a \end{pmatrix}$ $A^{n+1} : A' = a^n \begin{pmatrix} a & 1 \\ 0 & a \end{pmatrix}$ so formular holds formed.

Induction $A^{n+1} = \begin{pmatrix} a & 1 \\ 0 & a \end{pmatrix} \begin{pmatrix} a & n \\ 0 & a \end{pmatrix} = a^{n-1} \begin{pmatrix} a & n \\ 0 & a \end{pmatrix} = a^n \begin{pmatrix} a & n+1 \\ 0 & a \end{pmatrix} = A^{n+1}$ Write out $A^n \neq a$ and use this to decide condition on correct. A" (x) = an-1 (ax + ny) a such that sink |a| = 1 why? if |a| > 1 then $\lim_{n \to a} a^{n-1} \to a$ so some \longrightarrow source. |a| > 1If |a| < 1 then get at my as one tem which might grow? Ratio test: $\lim_{n \to \infty} a^n n = 0$? ratio $\frac{a^{n+1}(n+1)}{a^n n} = a \frac{n+1}{n} \times 1$ eventually for all n > 1, so limit is 0
